Subject: Genetically Altered Seeds/Food

1704 '99 JUN -9 P1:50

Dear Mrs. Clinton:

I am quite disturbed about the news regarding the altering of the DNA in seeds and various foods and plants. I am more disturbed that the food and seed altering is not regulated, and that they do not have to be labeled as such. It is outrageous to me that it would be allowed for sale and distribution without complete testing for the ramifications of fooling around with dna. While some altering is done to supposedly "enhance" the fruit or whatever, it is now being reported that it is also being used to introduce vaccines from the seed stage. Who asked for this? Who approved this? Who is regulating this? Who is making sure that the public is notified what is "altered" and not altered? Who tested this long term to find out what the ramifications are? Do you know that the first planting of genetically altered potatoes was done on Long Island? That the crop was disformed and could not be sold to the public because it was unappealing? Doesn't that show that "they" (whoever they be) doesn't quite know what they are doing, if it didn't work, and disfigured something that is supposed to be natural?

WHO IS WATCHING OUT FOR US? WHY IS THIS NOT REGULATED?

I beg of you.... please do something about this. It is an experiment that is being conducted on the American people, and more than likely is being done worldwide. Remember all those other "safe" improvements? Like, xrays?

Nuclear power? Vaccinations?

Even if we are allowed to purchase "organically grown" food, what about when we go out to eat? Frozen foods? Canned foods?

Please, I know you have a lot on your plate, but really, this is outrageous.

Thank you
